

Python Basics Test

Time: 60 Minutes

Maximum Marks: 50

Section A — MCQs

20 Questions × 1 Mark = 20 Marks

Q1. Which of the following is used to download Python?

- A) www.google.com
- B) www.python.org
- C) www.microsoft.com
- D) www.github.com

Q2. Which command is used to check the installed Python version?

- A) python check
- B) python --version
- C) python install
- D) version python

Q3. Which software can be used to write and run Python programs?

- A) Paint
- B) Calculator
- C) VS Code
- D) Notepad only

Q4. Which symbol is used to write a single-line comment in Python?

- A) //
- B) /* */
- C) #
- D) --

Q5. Which of the following is a valid variable name?

- A) 2name
- B) student-name
- C) student_name
- D) class

Q6. Which symbol is used for assignment in Python?

- A) ==
- B) =

- C) !=
- D) =>

Q7. What will be the data type of $x = 25$?

- A) String
- B) Float
- C) Integer
- D) Boolean

Q8. What will be the data type of $x = 25.5$?

- A) Integer
- B) Float
- C) String
- D) Boolean

Q9. Which data type is used to store text?

- A) int
- B) float
- C) str
- D) bool

Q10. Which of the following is a Boolean value?

- A) "True"
- B) 1
- C) True
- D) "Yes"

Q11. What is the output of $10 + 5$?

- A) 15
- B) 105
- C) 5
- D) 10

Q12. Which operator is used for multiplication?

- A) x
- B) *
- C) %
- D) //

Q13. Which operator is used to find the remainder?

- A) /
- B) //
- C) %
- D) **

Q14. What is the result of `10 // 3`?

- A) 3.33
- B) 3
- C) 1
- D) 0

Q15. Which operator is used for exponent/power?

- A) ^
- B) **
- C) //
- D) %%

Q16. What is the result of `2 ** 3`?

- A) 5
- B) 6
- C) 8
- D) 9

Q17. Which operator checks whether two values are equal?

- A) =
- B) ==
- C) !=
- D) ===

Q18. What does the `!=` operator mean?

- A) Equal to
- B) Greater than
- C) Not equal to
- D) Less than

Q19. Which function is used to display output in Python?

- A) `display()`
- B) `output()`
- C) `print()`
- D) `show()`

Q20. What is the output of the following?

```
x = 10
```

```
y = 20
```

```
print(x + y)
```

- A) 10
 - B) 20
 - C) 30
 - D) 1020
-

Section B — One-Liner Questions

10 Questions × 1 Mark = 10 Marks

- Q21.** What is Python?
 - Q22.** What is a variable in Python?
 - Q23.** Write the command used to check the Python version.
 - Q24.** What is the use of the print() function?
 - Q25.** Name any four basic data types in Python.
 - Q26.** What is the difference between = and ==?
 - Q27.** What is a string in Python?
 - Q28.** What is the use of the % operator?
 - Q29.** What is the use of ** operator?
 - Q30.** What is a Boolean data type? Give its possible values.
-

Section C — Practical Questions

10 Questions × 2 Marks = 20 Marks

Q31. Python Installation

Install Python on your computer and verify the installation by running:

```
python --version
```

Q32. First Python Program

Write a Python program to display:

Welcome to Python

Q33. Variables

Create three variables:

- name → your name
- age → your age
- course → your course

Display all three using print().

Q34. Arithmetic Operators

Create two variables:

a = 20

b = 6

Perform and display:

- Addition
 - Subtraction
 - Multiplication
 - Division
 - Remainder
-

Q35. Data Types

Create variables containing:

name = "Riya"

age = 20

percentage = 85.5

is_student = True

Use type() to display the data type of each variable.

Q36. User Input

Write a program that asks the user to enter their **name and age** and then displays both.

Example:

Enter your name: Riya

Enter your age: 20

Name: Riya

Age: 20

Q37. Comparison Operators

Create:

a = 25

b = 15

Use comparison operators to check:

- a > b
- a < b
- a == b
- a != b

Display the results.

Q38. Calculate Total

Create variables for three subject marks:

english = 75

maths = 80

computer = 90

Calculate and display:

- Total marks
 - Average marks
-

Q39. Power and Floor Division

Create:

a = 17

b = 5

Find and display:

- a ** 2
 - a // b
 - a % b
-

Q40. Mini Student Program

Write a Python program that takes the following information from the user:

- Student name
- Age
- Marks in 3 subjects

Then calculate and display the **total marks and percentage**.

Example output:

Student Name: Riya

Total Marks: 240

Percentage: 80.0%

Total: 50 Marks
