

Python Basics Test

Time: 60 Minutes

Total Marks: 50

Section A – MCQs

15 Questions × 1 Mark = 15 Marks

Q1. Which of the following is used to download Python?

- A) python.com
- B) python.org
- C) python.net
- D) python.in

Q2. Which option should be selected during Python installation on Windows to add Python to the PATH?

- A) Add Python to PATH
- B) Add Python to Desktop
- C) Create Folder
- D) Install VS Code

Q3. Which symbol is used to write a single-line comment in Python?

- A) //
- B) /*
- C) #
- D) --

Q4. Which of the following is a valid Python variable name?

- A) 2name
- B) my-name
- C) my_name
- D) my name

Q5. Which data type is used to store whole numbers?

- A) float
- B) int
- C) str
- D) bool

Q6. What is the data type of 10.5?

- A) int

- B) str
- C) float
- D) bool

Q7. Which function is used to display output in Python?

- A) display()
- B) output()
- C) print()
- D) show()

Q8. Which function is used to take input from the user?

- A) get()
- B) input()
- C) scan()
- D) read()

Q9. What is the output of `print(10 + 5)`?

- A) 105
- B) 15
- C) 10+5
- D) Error

Q10. Which operator is used for multiplication in Python?

- A) x
- B) ×
- C) *
- D) %

Q11. Which operator is used to find the remainder?

- A) /
- B) //
- C) %
- D) **

Q12. Which operator is used for exponentiation (power)?

- A) ^
- B) **
- C) //
- D) %%

Q13. What is the data type of "Python"?

- A) int
- B) float
- C) str
- D) bool

Q14. Which of the following represents a Boolean value?

- A) "True"
- B) TRUE
- C) True
- D) Yes

Q15. Which command can be used to check whether Python is installed in Command Prompt?

- A) `python --version`
 - B) `python install`
 - C) `python check`
 - D) `python start`
-

Section B – One-Liner Questions

15 Questions × 1 Mark = 15 Marks

Answer each question in **one or two lines**.

Q1. What is Python?

Q2. Write any two features of Python.

Q3. What is the latest Python installation file normally downloaded from?

Q4. What is the purpose of selecting **Add Python to PATH** during installation?

Q5. What is a variable in Python?

Q6. Write the syntax for creating a variable in Python.

Q7. Name any four basic data types in Python.

Q8. What is the difference between `int` and `float`?

Q9. What is a string in Python? Give one example.

Q10. What is a Boolean data type? Give its possible values.

Q11. What is an operator?

Q12. Write any four arithmetic operators in Python.

Q13. What is the difference between `/` and `//` operators?

Q14. What is a comment in Python and why is it used?

Q15. How can you check the data type of a variable in Python?

Section C – Practical Questions

10 Questions × 2 Marks = 20 Marks

Perform the following tasks in **Python/VS Code/IDLE**.

Q1. Python Installation

Install Python on your computer and verify the installation using Command Prompt.

Expected command:

```
python --version
```

Q2. First Python Program

Write a Python program to display the following:

```
Welcome to Python  
My First Python Program
```

Q3. Variables

Create three variables:

- `name = your name`
- `age = your age`
- `city = your city`

Display all three values using `print()`.

Q4. Different Data Types

Create variables containing:

```
Name → String  
Age → Integer  
Percentage → Float  
Student → Boolean
```

Print their values and data types using `type()`.

Q5. Arithmetic Operators

Create two variables:

```
a = 20
b = 6
```

Perform and display:

- Addition
- Subtraction
- Multiplication
- Division
- Floor Division
- Modulus
- Power

Q6. User Input

Write a program that asks the user for their **name and age** and displays:

```
Hello Rachna
Your age is 20
```

The values should be entered by the user.

Q7. Comments

Write a Python program that contains:

- One single-line comment
- At least three lines of Python code

Use comments to explain what the code does.

Q8. Comparison Operators

Take two numbers from the user and display the result of:

```
a > b
a < b
a == b
a != b
```

Q9. Calculate Total and Average

Create variables for marks in three subjects:

```
English = 75  
Computer = 85  
Maths = 80
```

Calculate and display:

- Total marks
- Average marks

Q10. Mini Student Information Program

Create a program that takes the following information from the user:

```
Name  
Age  
Course  
Percentage
```

Display all information in a neat format and also display the data type of each variable.
